

Several Tools in more detail

Legatool

Activate the Legatool icon, this sets Legatool in the ON mode. Then select 2 notes – and only 2 notes, not more- and use the slider to adjust the end position of the 1st note and start position of the 2nd note.

It is some kind of post-production tool for subtle note movements.

The size of the gap (if there is any) between the 2 notes remains the same. The text in the LegaTool slider shows the anchor point. The real movement is depending on the start position of the 2nd note and it is the 2nd note that moves relative to the 1st one.

Set The P to pin the tool.

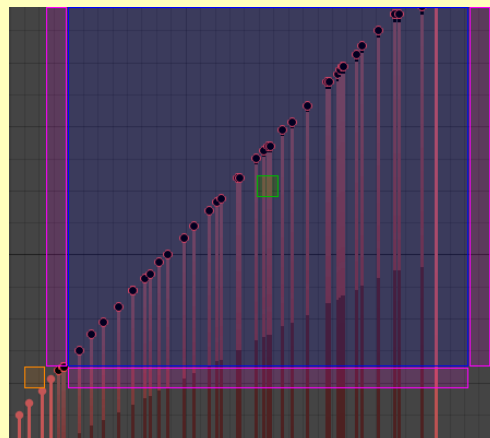

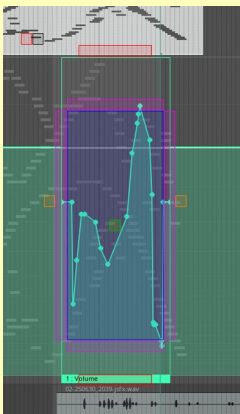

MIDI Ex Machina

<https://github.com/RobU23/ReaScripts/wiki/MIDI-Ex-Machina>

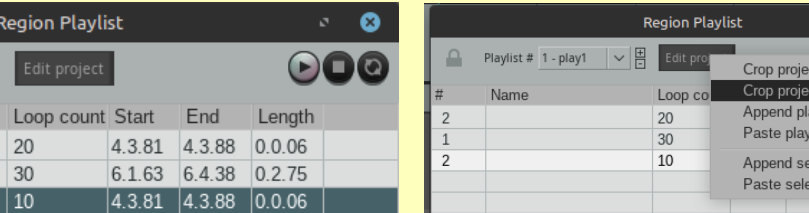

MultiTool

I have assigned a shortcut for this: Ctrl+Alt+5

This is MultiTool working on CC lane. Below you see it working on the Automation Lane.

REAPER v7.41 - Registered to Menno Kneve Arrangement Toolbar (docked)

The screenshot shows the Audacity interface with a 'Region Playlist' window open. A context menu is displayed over the playlist, listing the following actions:

- Crop project to playlist
- Crop project to playlist (new project tab)
- Append playlist to project
- Paste playlist at edit cursor
- Append selected regions to project
- Paste selected regions at edit cursor
